In 2007, a statute was passed in Minnesota for an electronics product stewardship program. Manufacturers of video display devices register with the state each year and pay a fee. This fee helps pay for the collection and recycling of covered electronic devices sold in Minnesota.

Over the past 11 years, Clay County has recycled **1600 tons** of electronic waste!

Recycling old electronics saves energy. It also requires fewer raw materials and natural resources to be mined from the environment. Recycling old electronics diverts them from entering our local landfill.
